

Integrated systems based on the RPlan API

End-to-end processes

RPlan's application programming interface (API) enables you to integrate RPlan with other software systems in your IT landscape. Link your project planning results (e.g. dates, degree of completion, progress) with data from your ERP or CRM system. RPlan data and structures are interchanged in XML format.

Sample uses

- If you create a project in your ERP system, the project is automatically set up in the RPlan project management system. Project master data and the project structure (based on RPlan templates) are also transferred.
- Schedule information is transferred from the project management system back to the ERP system to ensure that the information there is kept up-to-date (e.g. for budget approval or costs tracking).
- Standardized processes from process modeling software (such as ARIS) are transferred to project scheduling operations.
- Information originating from various systems and shown in a enterprise-specific project or program cockpit can be combined with, for example, key product and project data.

Your benefits

- Project management as a component of the corporate IT landscape
- Integration across business processes
- Current project dates in all relevant IT systems
- Access via any programming language and development environment

Technical details

Based on recognized standards:

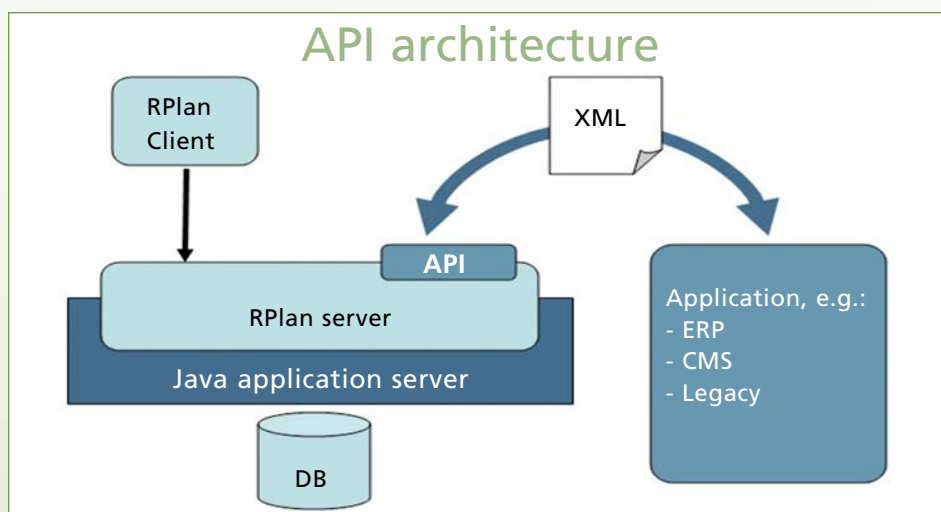

- XML data format
- Data transfer via HTTP/S

RPlan is successfully used by renowned companies such as:

Airbus, AKT, Allgaier, BMW, Bosch, Daimler, Edscha, Europrop International, General Motors, GETRAG FORD Transmissions, Gustav Wahler, Heinz Glas, Hella, Huf, IAV, Kinshofer, Komax, Kostal, KUKA, Lápplé, Manz, Marquardt, Mitsubishi, MTU Aero Engines, Osram, Rolls-Royce Deutschland, Schwarz Pharma, Sitech, smart, Stankiewicz, ThyssenKrupp Drauz Nothelfer, ThyssenKrupp Presta, Volkswagen, Vredestein, ZF Getriebe and many more.
